Summary

Backend Developer with 4 years of experience building and maintaining enterprise application using Java and Spring Boot. Experienced in REST API development, SQL optimization, distributed systems, and containerized deployments. Skilled in troubleshooting production issues, improving application performance, and developing scalable backend services in high-availability environments.

Experience

CloudBees

Mar 2024 – Apr 2026

Associate Software Engineer

Remote

- Designed and developed scalable backend components using Java and Spring Boot for an enterprise DevOps continuous delivery (CDRO) platform.
- Built a Kubernetes-based auto-scaling agents feature in Java supporting 10K+ daily pipeline runs, reducing manual provisioning by 50% in a large-scale customer environment.
- Upgraded CDRO Orchestration microservice runtime from Java 17 to Java 21, resolving breaking changes and delivering the migration without regression issues.
- Diagnosed and resolved critical production issues involving multithreading, race conditions, and database performance bottlenecks through SQL query optimization and indexing.
- Reduced Java memory leaks using heap dump analysis, JVM monitoring tools, and cache optimization techniques.
- Enhanced application maintainability through code refactoring using modern Java features, appropriate design patterns and resolution of SonarQube-reported code quality issues.
- Increased test coverage using JUnit, Mockito, and Spock, reducing flaky test retries by 40% and reducing compute costs.
- Implemented TLS-secured database connectivity across PostgreSQL, MySQL, and Oracle and validated performance impact through CI pipelines (Jenkins).
- Strengthened application security by resolving Snyk-identified vulnerabilities (XSS, CSRF, command injection) across multiple microservices, reducing security findings by over 40%.

BUDDI AI

Jun 2022 – Mar 2024

Software Engineer

Chennai

- Developed REST API for Elasticsearch-based search platform, enabling self-service medical records uploads by SMEs and eliminating manual indexing bottleneck for large-scale data onboarding.
- Optimized Hibernate ORM performance by resolving N+1 query issues, improving batching strategies, and reducing database query overhead.
- Deployed and managed microservices using AWS ECS Fargate and EC2, enabling scalable containerized deployments with CloudWatch-based log monitoring.
- Introduced event-driven workflow using Kafka to orchestrate existing microservices (OCR, PHI masking), enabling asynchronous processing of thousands of documents per minute.
- Implemented in-memory caching with TTL-based invalidation to reduce API response latency and minimize database load for high-traffic services.
- Optimized Docker build pipeline using multi-stage builds, reducing image size by 50% and accelerating deployment time in Kubernetes-based environments.

Trimble

Jan 2022 – Jun 2022

Graduate Technical Intern

Chennai

- Developed automated test scripts using Java and Selenium WebDriver, improving test coverage for new application features.
- Documented and executed 100+ manual test cases in TestRail, identifying defects and improving feature reliability in an Agile environment.

Technical Skills

Languages: Java, Python, Groovy, SQL

DevOps: Docker, Kubernetes, Helm, AWS(EC2 ECS S3), CI/CD

Backend : REST APIs, Microservices, Event-Driven Architecture

Frameworks: Spring Boot, Spring Data JPA Hibernate, Kafka

Databases: MySQL, Elasticsearch

Education

Thiagarajar College of Engineering

B.Tech Information Technology (GPA: 8.73)

2018 – 2022

TamilNadu
